

REMARKS

Entry of the foregoing amendment to the Specification is requested to comply with the requirements of 37 C.F.R. 1.78(a)(2).

The claims of the subject application have been amended to avoid multiple dependency. Favorable consideration of the subject application is respectfully requested.

Attached hereto is a marked-up version of the changes made to the claims by the current amendment. The attached page is captioned "**Version with markings to show changes made.**"

Respectfully submitted,

BURNS, DOANE, SWECKER & MATHIS, L.L.P.

VERSION WITH MARKINGS TO SHOW CHANGES MADE

In the claims:

Claim 4 - 11 have been amended as follows:

4. Tooling according to ~~any one of claims 2 and 3~~, in which the elements (14, 16) of the rigid mould (10) are placed inside a rigid envelope (20) and the pressure application means include at least one flexible wall (36) connected in a leak tight manner on the envelope (20) and that can be forced into contact with the said external face (16b) by applied pressure.

5. Tooling according to ~~any one of claims 2 and 3~~, in which the elements (14, 16) of the rigid mould (10) are placed in a rigid envelope (20) and the means of applying the pressure include at least one leak tight bladder (16') bearing on the envelope (20) and that is forced into contact with the said outside face (16b) by applied pressure.

6. Tooling according to ~~any one of the previous claims~~, in which the rigid mould (10) forms a cavity (12) with a U-section and has a central element (14) materializing the bottom of the cavity and two end elements (16) materializing the sides of the cavity, the holding means (36) normally keeping the end elements in contact with the side edges (14b) of the central element (14).

7. Tooling according to claims 4 and 6 combined, in which the means of applying pressure comprise two flexible walls (36) that can be forced into contact with the said external faces (16b) of each of the end elements (16), by applied pressure.

8. Tooling according to either of claims 4 and 7, in which external pressure is applied to the flexible walls (36).

9. Tooling according to claims 5 and 6 combined, in which the means of applying pressure comprise two leak tight bladders (36') that can be applied in contact with the said outside faces (16b) of each of the end elements (16), under the effect of the pressure output by an external pressure source.

10. Tooling according to ~~any one of the previous claims~~, in which the cross-section of the cavity (12) is uniform along its entire length.

11. Tooling according to ~~any one of claims 1 to 9~~, in which the cross-section of the cavity (12) is variable from one end to the other.

Claims 12-19 have been added.
